OFFICE OF THE REVENUE COMMISSIONER IN MYSORE,
Dated Bangalore, 10th May 1927.

S. KUPPUSWAMY IYER,
For *Revenue Commissioner.*
5 B

A brief review on the recorded vital statistics for the half-year ending 31st December 1926.

A statement showing by districts the number of births, the number of deaths classified according to principal causes and the infantile mortality recorded during the half-year ending 31st December 1926, is hereto annexed.

BIRTHS.

2. The total number of births registered during the half-year was 64,899 as against 56,173 in the preceding half-year equivalent to an annual ratio of 22·15 and 19·17, respectively per mille of population. The highest birth rate (29·73) was returned for the Kolar District, and the lowest (15·42) for the Kadur District, the rates for the other districts ranging between 26·27 (Tumkur) and 16·52 (Hassan).

DEATHS.

3. The number of deaths under all causes returned for the half-year totalled 46,763 yielding an annual ratio of 15·78 per mille of population as compared with 40,815 and 13·93 per mille respectively in the preceding half-year. The death-rate for the Tumkur District (12·55) was the lowest and that for the Shimoga District (27·66) the highest, the rates for the other districts ranging between 13·44 (Bangalore) and 21·54 (Kadur).

Deaths exceeded births in two districts, *viz.*, Shimoga and Kadur.

4. The mortality among children under one year of age amounted to 5,889 as against 4,703 during the previous half-year. This gives an average of 90·73 per 1,000 of recorded births. The highest infantile mortality rate was returned for Shimoga District. The rates were also high for Kadur (126·75), Hassan (114·81) and Chitaldrug (103·55.) In the other districts the rates ranged between 51·96 (Mysore) and 78·16 (Bangalore).

5. Plague—was returned for all districts and accounted for a total of 4,210, deaths as compared with 3,078 in the previous half-year, the districts of Shimoga, Mysore and Chitaldrug contributing a relatively large number of deaths, *viz.*, 1,257, 839 and 676 respectively. The number of inoculations performed totalled 84,541 for the half-year.

6. Cholera. Sporadic cases of cholera (suspicious) were returned for four districts, *viz.*, Bangalore, Hassan, Kolar and Mysore.

7. Under small-pox, the recorded deaths were 190 as against 638 in the previous half-year, the districts most affected being Chitaldrug and Mysore. The number of vaccinations performed during the half-year totalled 55,958.

8. During the half-year 22,275 deaths were returned as due to Fevers as against 20,125 during the preceding half-year. The incidence of fevers in the Mysore, Shimoga and Hassan Districts was high as compared with the other districts owing to the prevalence of Malaria. The free distribution of quinine in the affected areas in the malnad districts was continued. Anti-malarial measures such as filling up or canalising ditches or hollows, etc., are reported to have received some attention.

During the half-year the Reserve Sanitary Inspector attached to this department was deputed to conduct malarial surveys in the Saklespur and Arsikere Towns and hook-worm investigations in the respective taluks. Detailed inspections for hook-worm were made in an aggregate of 79 villages in the Saklespur and Arsikere Taluks, out of which hook-worm was found to be prevalent in eight villages. The existance of the disease was confirmed by an examination of the follal matter. In the two towns the actual breeding grounds of mosquitoes have been mapped out after examination of the larvae. The potential breeding places have also been noted down for necessary further action.

9. One thousand three hundred and ninty-four deaths under respiratory diseases were returned as against 1,394 in the previous half-year.

10. A total of 2,094 deaths under Dysentery and Diarrhœa was recorded during the half-year as compared with 1595, in the preceding half-year.

11. Six hundred and forty-four deaths were returned as due to injuries, including accidents, snake-bite and suicide.

12. Under all other causes 15,947, deaths were returned as against 13,368 deaths in the previous half-year.

13. General:—On the whole the public health during the half-year may be said to have been satisfactory except for the prevalence of plague in most of the districts.

OFFICE OF THE SANITARY COMMISSIONER IN MYSORE, BANGALORE.

Letter No. 652—27, dated the 16th July 1927, from the District Health Officer, Beliary District, to the Sanitary Commissioner in Mysore, Bangalore.

Re *Manchala Festival—from 13th August to 17th August* 1927.

I have the honor to state, that there is at present a very severe cholera epidemic ranging in this district especially in villages around Manchala in Adoni Taluk. The festival is largely attended by pilgrims from your State. I would therefore request you to give wide publicity in your area about the above fact and advise the intending pilgrims not to attend the ensuing festival. Advantage may be taken of any local vernacular papers in the districts of your State bordering on this district for giving due publicity.

B. MAHOMED USMON,
Sanitary Commissioner.

10. Prospects of the season are fair. Prices of food stuffs continue to be stationary. Cooly classes generally find labour.

11. Cattle are reported to be generally healthy except for Black Quarter at Hebbalu, Hemmanabethur, Foot and Mouth disease at Mandalur in the Davangere Taluk and Rinderpest in parts of Jagalur Taluk and Harihar Sub-Taluk. It is reported that the Veterinary Inspector attached to the taluks are taking needful action to arrest the spread of the disease. Water, fodder and food stuffs are generally available. In Challakere Taluk and parts of Chitaldrug, Hiriyur, Hosdurga and Molakalmuru Taluks however, difficulty for fodder is being felt. Arrangements have been made for the free grazing of cattle from the affected parts in the State Forests of this District as well as in those of the Sira, Channagiri and Tarikere Taluks. Necessary funds have also placed at the disposal of the Amildars of Challakere, Chitaldrug, Jagalur, Hiriyur, Molakalmuru and Hosadurga for granting fodder loans. It is reported there that were good showers of rain on 11th September 1927, at Chellakere, Hiriyur, Chitaldrug and Hosadurga, the rainfall gauged at those places being 2·40, 3·94, 1·31, and 1·06 respectively.

A BRIEF REVIEW ON THE RECORDED VITAL STATISTICS FOR THE QUARTER ENDING 31ST MARCH 1927.

A statement showing the districts, the number of births, the number of deaths classified according to principal causes and the infantile mortality recorded during the quarter ending 31st March 1927.

2. *Births.*—The total number of births registered during the quarter ending 31st March 1927 was 26,369 as compared with 64,899 in the preceding half-year, equivalent to annual ratios of 17·99 and 22·15 respectively, per mille of population. The highest birth-rate (21·50) was returned for the Tumkur District and the lowest (14·52) for the Hassan District, the rates for the other districts ranging between 20·82 (Kolar) and 15·13 (Kadur).

3. *Deaths.*—The number of deaths from all causes returned for the quarter totalled 21,905 yielding an annual ratio of 14·93 per mille of population as compared with 46,763 and 15·78 per mille respectively, in the preceding half-year. The death-rate for the Chitaldrug District (10·79) was the lowest and that for the Shimoga District (25·65) the highest, the rates for the other districts ranging between 12·39 (Tumkur) and 23·56 (Kadur).

Deaths exceeded births in the Shimoga and Kadur districts.

4. The deaths among infants under one year of age were 2,158 as against 5,889 during the previous half-year. This gives an infant mortality figure of 81·83 per 1,000 of recorded births. The highest infantile mortality rate was returned for Kolar district. The rates were also high for Kadur (113·31) and Shimoga (110·29). In the other districts the rates ranged between (46·04) Mysore and (167·70) Chitaldrug.

5. *Plague.*—Was returned for all districts except Kadur. A total of 910 deaths was returned as compared with 4,210 in the previous half-year. The Districts of Bangalore, Mysore and Shimoga contributing a relatively larger number of deaths *viz.*, 242, 197 and 158 respectively. The number of Anti-plague inoculations performed during the quarter totalled 15,750.

6. *Cholera.*—Sporadic cases of suspicious cholera numbering 15 were returned for four districts *viz.*, Kolar, Mysore, Shimoga and Chitaldrug.

7. *Small-pox.*—The recorded deaths under this cause were 127 as against 190 in the preceding half year, the districts most affected being (Mysore) 49 and (Chitaldrug) 44. The number of vaccinations performed during the quarter totalled 22,832.

8. During the quarter 11,600 deaths were returned as due to fevers as against 22,275 during the preceding half year. The incidence of fevers in the Mysore, Shimoga and Hassan Districts was high as compared with other districts owing to the prevalence of Malaria in them. The District Boards of these districts distributed quinine freely amongst the malaria stricken areas. The local Medical Officers and the Sanitary staff visited the affected areas and rendered appropriate medical aid and advise.

Anti-malarial measures such as filling in or canalising of pits and hollows are also reported to have received special attention of the local authorities.

9. Eight-hundred and sixty-nine deaths under Respiratory diseases were returned against 1,395 in the previous half year.

10. A total of 809 deaths under Dysentery and Diarrhœa were recorded during the quarter as compared with 2,094 in the preceding half-year.

11. Two hundred and ninety-six deaths were returned as due to injuries including accidents, snake bite and suicide.

12. Under "All other causes", 7,279 deaths were returned as against 15,947 deaths in the previous half-year.

13. *General* for the State as a whole, the general Public Health was fair, during the quarter under review.

The birth-rate was higher than the death-rate and the infantile mortality was comparatively low. While epidemics were not entirely absent, none prevailed to any alarming extent. Three of the malnad districts showed a high incidence of fevers. There is no doubt that most of the fever cases are malarial.

Statement showing the Vital Statistics for the quarter ending 31st March 1927.

8. Markets were adequately supplied.

9. *Agricultural operations.*—Harvesting operations are in progress in parts of certain taluks of the district.

Standing crops.—Cotton, bili jola, kadale, avare, chillies, castor, paddy, wheat, sugar-cane, and navane are reported to be generally in a fair condition. Still they are all reported to be badly in need of rain.

Seeds sown.—Sowing of sugar-cane is reported to be going on in Hiriyur Taluk.

Crops harvested.—Chitaldrug Taluk—Togari and horse gram, 4 annas. Challakere Taluk—Cotton and bili jola, 4 annas. Hiriyur Taluk.—Kadale and sugar-cane, 8 annas. Holalkere Taluk—Sugar-cane, cotton and bili jola, 8 annas. Davangere Taluk—Jola, ragi, paddy, navane, cotton and sugar-cane, 12 annas.

10. Prospects of the season are fair. Prices of food stuffs continue to be stationary. Labour is generally available.

11. Cattle are reported to be generally healthy, except for Doddaroga in parts of Davangere and Hosdurga Taluks. It is reported that the Veterinary Inspectors concerned are taking needful action.

Water and fodder are generally available.
